| 8. Name these things used to carry out sanitation.  |                    |            |  |  |
|   |                    |            |  |  |
|   |                    |            |  |  |

| 9. Which immunis         | able disease m       | iakes people id  | ımeş              |
|--------------------------|----------------------|------------------|-------------------|
| 10. What is food?        | ?                    |                  |                   |
|                          |                      |                  |                   |
| 11. Draw and nai         | <u>me these exam</u> | ples of food fro | <u>m plants</u> . |
| cassava                  | matooke              | carrots          | beans             |
|                          |                      |                  |                   |
|                          |                      |                  |                   |
|                          |                      |                  |                   |
|                          |                      |                  |                   |
|                          |                      |                  |                   |
|                          |                      |                  |                   |
| 12. Give two reas        | sons why we ed       | at food?         |                   |
| i)                       |                      |                  |                   |
| ii)                      |                      |                  |                   |
| 13. <b>Underline the</b> | food that provi      | ides proteins.   |                   |
| millet, meat,            | rice, beans,         | posho, eggs      |                   |
|                          |                      |                  |                   |
| 14. Write out veg        | etables from th      | ne list.         |                   |
| cabbages                 | chicken              |                  |                   |
| meat                     | tomatoes             | S                |                   |
| carrots                  | fish                 |                  |                   |
|                          |                      |                  |                   |
| 15                       | means mar            | n and his surrou | ndings.           |
| [Environment, s          |                      |                  | <b>U</b>          |

| omestic animals.          |
|---------------------------|
| ii)                       |
| live in water.            |
| i)                        |
| to fly?                   |
| ırts does an insect have? |
| of an insect.             |
| us honey.                 |
| ng parts of an insect.    |
|                           |
| 60 marks) 2.  A  B  C     |
|                           |

| b) Le  | egs are used for |                       |               |
|--------|------------------|-----------------------|---------------|
| eate   | ,                | camples of plants wh  | ose roots are |
|        |                  |                       |               |
|        | ame these parts  |                       |               |
|        |                  |                       |               |
|        |                  |                       |               |
| 22. a) | Give the young   | ones of the animals   |               |
| Cow    |                  |                       |               |
| Goa    | t                |                       |               |
| Fish   |                  |                       |               |
| b) Id  | entify the animo | al that moves by runi | ning.         |
| 23. a) | List down any tw | vo examples of seed   | s which are   |
| eate   | n by man.        |                       |               |
|        |                  |                       |               |
| ii)    |                  |                       |               |
|        |                  |                       |               |

## b) Name these examples of food got from plants.
