July/August 2022		
2hours 30minute s		

KAMSSA JOINT MOCK EXAMINTIONS **Uganda Advanced Certificate Of Education**BIOLOGY

Paper 1

2hours 30minutes

Instructions to candidates:

- Answer all questions in both Sections A and B.
- Answers to Section A must be written in the spaces provided by the box on the right side of each question.
- Answers to Section **B** must be written in spaces provided below each question.
- No additional sheets of paper should be inserted in this booklet

For Examiner's Use Only

SECTIONS	MARKS
A: 1-40	
B: 41	
42	
43	
44	
45	
46	
TOTAL	

SECTION A: (40 MARKS)

Write the letter to the	e correct answer in	the correspon	nding box.	Each q	uestion in	this sect	tion c	arries
one mark.								

1.	Which one of	the following statements is no	ot 1	true torus?	
		<u> </u>		C. It acts as a valve in some plan	nts
	-	to the secondary cell wall		-	
2.		•		gestion of starch in the ileum would	ld;
		e because of suitable pH due t	•		
	-	for absence of enzymes.			
		<u> </u>	ne	mucosa contains the necessary enz	zymes.
		occur because of acidic pH in		•	
3.		following is true about sex-lin		•	
		_		C. Males are either carriers or suffe	erers.
				D. Females are either normal or car	
	their sons.	1			
4.	The similarities	es of the skeletal structures of	m	oles, monkeys and whales lead to	the conclusion
	that they:			•	
	•	om a common ancestor	(C. Evolved by convergent evolution	on
	B. Belong to	the same class	Ι	D. Originate from the same enviror	nment
5.	_		V	olume of blood pumped per beat of	f an adult man
	while resting	and during vigorous exercise.			
	Table 1				
	Adult man	Heart beat in beats per minute	e	Volume of blood pumped	
		_		per beat in cm ³	
	Resting	50		50	
	Exercising	200		75	
	By how many	times was the volume of bloc	od	passing through the heart per minu	ute increased
	during exercis	se?			
	A. 1.5 times	B. 3 times	(C. 6 times D. 4 tim	nes
6.	An absolute li	mit imposed by the environme	en	t on population increase is called	
	A. Biotic pote	ential	(C. Carrying capacity	
	B. Mortality		Ι	D. Environmental resistance	
7.	Which one of	the following can be describe	d	as instinctive behavior?	
	A. A bird buil	_		C. A dog responding to routine	
	B. A man sho	outing after electric shock		meal bell	
			Ι	D. A dragon fly capturing prey.	
8.	During heat o	f the day, control of stomatal	m	ovements to reduce excessive water	er loss is due
	to				
		umulation of mineral ions in t	he	guard cells.	
	•	of abscisic acid.			
		ersion of glucose to starch in t		_	
	•	of glucose during photosynthe			
9.				measures 0.4mm at magnification	
	A. 0.1μm	B. 0.01 μm	(C. 1.0 μm D. 0.001	1 μm
					l l

10. The goblet cells are normally supported	by:	
A. Squamous epithelium	C. Cilia	
B. Stratified epithelium	D. Columnar epithelium	
11. Chordates have the following characterist		
A. Dorsal notochord extending into the	C. Dorsal hollow nerve tube	
head	D. Post anal tail	
B. Gill clefts		
12. Some bacteria when infected with micro	phages, may make a particular amino acid	they could
not make before. This is due to		
A. Transformation	C. Transduction	
B. Mutation	D. Conversion	
13. Centrioles are short cylinders with a patt		be
described as:		
A. 9+3 B. 9+2	C. 9+0 D. 9+4	
14. Which one of the following pairs of cha		
A. Body is radially symmetrical and trip		
B. Body is bilaterally symmetrical and h		
· · · · · · · · · · · · · · · · · · ·	hey exhibit polymorphism as polyp and m	nedusa
D. Body lacks mesoderm and is diplobla		ioausu
15. Which one of the following is not a char		
A. Its roots collect nutrients from dripping		
B. Its roots are on the outside the body of		
C. It competes for light	of the supporting tree.	
D. It cannot produce its own food		
16. Into which one of the following is pyruv	rate produced in alycolysis converted, before	re enterino
the tricarboxylic acid cycle?	are produced in grycorysis converted, octo.	
A. Acetyl coenzyme A	C. Ethanol	
B. Coenzyme A	D. NADH	
17.A desert mammal's lower lethal tempera		in cold
regions because a desert mammal has:	atare is inglier than that of a manimal living	
A. Small extremities	C. Thick fur	
B. Poor insulation mechanisms	D. A small surface area to vo	olume ratio
18. The table below shows a system of two		
Cell X	Cell Y	
Ψs =-700kpa	Ψs=-900kpa	
Ψp=500kpa	Ψp=400kpa	
TP 200KPu	1p rompu	
Which one of the following statements is	s correct about the movement of water in the	ie system?
A. No water moves out of both cells X a		
B. There is net movement of water from		
C. There is no net movement of water be		
D. There is net movement water from ce		
19. The primary meristematic tissue in plant		
A. Protoxylem	C. Procambium	
B. Protoderm	D. Ground meristem	

20. Tension in skeletal muscle	s does not normally cha	ange immediately on recei	ving a stimulus
mainly because	to he formed		
A. Action potential delays B. Some time is taken for contract.		sad	
		sea	
C. ATP has to first be synthered.			
D. Actin filaments have to		1111 4 1	16
21.A young plant cell whose n some materials most likely		wall were observed to be r	nailormed lacking
A. Chloroplasts		C. Ribosomes	
B. Golgi body		D. Endoplasmic reticu	lum 📖
22. An individual whose heart	beat remained at 71 be	ats per minute during a str	enuous exercise
collapsed: It can be conclude	led that such an individ	lual had a malfunctioning:	
A. Sinoatrial node		C. Atrio-ventricular no	ode
B. Hindbrain		D. Intercalated discs	
23. The reason that contributes	to the survival of orga-	nisms which live at the bot	tom of fresh water
lakes is;			
A. Cooling water below a c	certain temperature inci	eases its volume	
B. Freezing water increase			
C. Ice is denser than water			
D. Water has high latent he	eat of vapourisation		
24. The following results were	-	of F1 generation of pure br	reeding round,
yellow seeded plants with t			
Dominant traits	Recessive traits	Total number of F2	1
		offspring	
Round seeds	Wrinkled seed	937	
Yellow seeds	Green seeds		
What would be the actual n	umber of F2 offspring	with wrinkled vellow seed	s?
A. 527 B. 234	C. 17	· · · · · · · · · · · · · · · · · · ·	
25. Curare is known to block n	icotine receptors on ne	uromuscular junction. Whi	ch one of the
following explains the fact	-	•	
A. Reduces blood flow in t		auses muscle contraction	
B. Relaxes the muscles	•	nhances effects of acetyl cl	holine
26.In the gastric glands, the di			
following cells respectively	-	1	
A. Kupffer cells and Oxynt		xyntic cells and Peptic cell	ls
B. Kupffer cells and Peptic		eptic cells and Oxyntic cell	
27.In estimating the population			
total number of weeds cour			
A. 20		C. 833	
B. 300		D. 1,200	
28. Young human babies tend t	to grasp any solid or ro	*	palms of their
hands. This behavior is cau		J L 2	
A. Imprinting	J	C. Classical condition	ing
B. Operant conditioning		D. Fixed action pattern	_
B. operant continuing		B. I mied demon pattern	

Animals	Volume cm ³	Surface Area cm ²	
	ould most need a specialized		
36. The volume and surface are			ing table
D. Many closely packed on		4	
C. High flicker fusion frequ			
B. Rapid impulse transmiss			
A. Large coverage of the he			
35. Which one of the following	does not contribute to the sl	hort reaction time in an insec	ct?
D. Depend on water for fer	tilization		
C. Lack well developed vas	scular system		
B. Are covered by a thick of	euticle		
A. Lack roots	• •		
34. Bryophytes and pteridophyte	tes cannot fully exploit the to	errestrials habitats because the	hey
D. Memory cells			
C. T- Helper cells			
B. T-Suppressor cells			
A. T- Killer cells			
33. Which one of the following	cells is the most valuable to	HIV?	
D. Discharged			
C. Neutral			
B. Depolarized			
A. Polarized			
membrane of Giant axon?	3	ī	
32. Which of the following term	3		cell
	use nitrogen in its elemental		
•	peing reduced by pollution d		
	apidly used by most organis		
	gen in the atmosphere than c		
31. Nitrogen is often a limiting	nutrient in many ecosystems	s because:	
D. Yolk sac			
C. Corona radiata			
B. Chorion			
A. Amnion	, is pure of the emeryeme cer	Processing Processing Territor	
30. Which one of the following		ntribution to placental forma	tion?
D. Cause certain seeds to go			
C. Commonly promote part			
B. Delay the senescence of	•		
A. Promote bud formation is		eytokiimis. They	
29. Which one of the following	statements is not true of the	Cytokinins? They	

Animals	Volume cm ³	Surface Area cm ²
A	1	6
В	8	24
\mathbf{C}	64	96
D	64	28

		ch one of the following ecological effect	s may not be caused by deforest	tation?
	_	pecies extinction		
		eduction in soil fertility looding and landslides		
		cid rain		
			allan amaina What would be the	number of
	_	ant has 12 chromosomes in each of its possible of its possible of its offspring former.		number of
	A. 24	1 &	ed by by autopolyploidy?	
	B. 96			
	C. 48			
	D. 36			
			is and correctly matched with th	as affact it courses
		ch one of the following events is both true process of skeletal muscle contraction?	-	ie effect it causes
	111 1110	Event	Effect	7
	Λ			
	A	Actin filaments slide past myosin	H zone elongates	_
	В	Tropomyosin combines with calcium ions	Binding sites are exposed	
	С	Actin filaments overlap each other	Light band shortens	_
	$\overline{\mathbf{D}}$	Troponin combines with calcium	Tropomyosin changes shape	_
	ט	ions	Tropomyosin changes shape	
		10115	<u> </u>	
	C. Re	ctively extruding salts etaining urea in their bodies xcreting trimethylamine		
41.	.(a) W	hat is meant by crossing over ?	N B (60 MARKS)	(03marks)
	(b) V	What is the effect of crossing over in sex	tually reproducing populations?	(02marks)
	(c) Exist ste	xplain why a cross between a horse of 6 rile.	4 chromosomes and a donkey o	

.Doctors measured the thickness of the v	walls of three blood vessels in a large of	oroun of ne
The doctors also observed great variation		
cycle. Their results are given in the table	_	,
Name of vessel	Mean wall thickness	
Aorta	5.7	
Pulmonary artery	1.0	
Pulmonary vein	0.5	
(a) Explain the difference in thickness b	etween the nulmonary artery and nuln	nonary veir
(a) Explain the difference in thickness o		(03 marks)
(h) Explain the quest varietions in the th	ialraga af tha agus duning agala gardi	1 _o
(b) Explain the great variations in the th		ac cycle. (04 marks)
		,
